## Why Choose us?

Full CSCS Compliance.  
All our ground workers hold an NVQ 2 in ground working.

All plant operators trained to CPCS standard.

Very respectable Health & Safety Record and reputation

Our own mobile plant maintenance team ensuring the continued rapid support of all our items of plant.

### Special points of interest:

- A low impact, on site operation that has a large positive impact on policy & costs.
- Fast mobilisation of a very efficient and cost effective system.
- The ability to work anywhere without negative traffic management or space implications.

# BREAKING NEWS!!!

## On Site Recycling Services

**We are proud to announce that we can now offer on site recycling to our clients !**

In line with our Environmental Policy and those of our clients we aim to turn waste that is not only expensive to dispose of but has obvious adverse environmental implications, into a useful product to be used again elsewhere.

**You'll hardly even notice we are recycling!**

On small to medium sites recycling rubble that is otherwise useless is

often not an option, as static crushers are expensive to set up and operate.

This is where this system comes into it's own! We now have the ability to crush up to 70 tons of rubble per

### Something to shout about!

The Environment is the governing factor, but what will the benefits be to you?

Well no endless delivery vehicles visiting site, themselves causing pollution, a traffic management issue, transferring mud etc around the site and often onto the public highway on their wheels, reduced sweeper requirements due to less mess. Reduce land fill requirements.

Reduce or in some cases eliminate the requirement for vehicles to import the crushed material from off site, again

hour using our own excavators equipped with our own bucket crushers. Easy to deploy, no extra space required for a stand alone crusher unit, so a more viable option on any site that is tight for space, or where is not reasonably practicable to recycle based on the cost element of static crushers.

Now choosing to take the recycling option on smaller sites need not eat into your profit, this while enabling us all to do our utmost to protect the environment for future generations at the same time.

Settings from 125mm to 25mm.  
Quiet - little dust - one man operation  
Can handle rebar – no belts to rip

eliminating the previously mentioned issues.

All these issues have cost implications to both the environment and to your final profit margin.

Another string to your Environmental Protection bow that could actually be a benefit to your finances as well as your company image.

For further details please do not hesitate to get in touch.. We'll be glad to help.
